ADVANCED GERMAN NANO TECHNOLOGY FORMULATION

“Bridges the gap in between applications”

Now Available!

Dubai Municipality Approval:
RG/DD/11/07/00006
Complies with internationally
Recognized: ASTM E2180 test
Certified biocompatibility to:
DIN EN ISO 10993-1

Disinfectant WIPES

Professional Surface Disinfection, Hygiene Sanitation & infection Control

Water-based disinfection with long-term effect against viruses, bacteria & fungi
Bacoban Nano Technology Advantage

This technology introduces the sol-gel process. On application, Bacoban develops an invisible sponge-like gel lining where the biocides that kill the germs are embedded. This ultra-thin coating adheres to the surface and stays potent for a longer period of time even if the disinfectant has dried up. Since micro-organisms like bacteria, fungi and viruses are always surrounded by hydro-shell they activate the biocides on contact, thus effective neutralization and eradicating the microbes.

Bacoban’s water-based NanoTechnology assures potency to last for up to 240 hours or 10 days, longer than most disinfectants available today!

Assessments made according to: ASTM E 2180 standard on an untreated ceramic test surface shows the following results.

Bacoban Nano Technology Advantage

Long Lasting Effectiveness & Protection

Assessments made according to: ASTM E 2180 standard on an untreated ceramic test surface shows the following results.

| Microbe | Biocides | Disinfected surface |

Most widely used disinfection solutions by healthcare practitioners, clinics, hospitals, laboratories, pharmacists, health gyms & spas all over Europe today!

Water-based

Practical & Easy Application

- Bacoban wipes are handy and easy to use.
- Ready-to-use, no more mixing and dilution necessary.
- No chances for over or under formulation.
- No Mess, Disposable.
- No added tools or equipment necessary.
- Less cost.
- Invisible, No stain.
- Safe to most materials & surfaces.
- Odour suppressant.

Promo Prices:

- AED 59.00
- AED 930.00
